CASE STUDY

The Bank of Princeton

New Brunswick, NJ

The Bank of Princeton branch in New Brunswick, New Jersey was a fit-out of an existing unoccupied storefront space. The project scope included selective demolition, installation of a raised floor, an exterior ATM, teller stations fabricated with high-security glazing, offices, toilet rooms and an employee kitchenette. The work included security systems, carpentry, drywall, acoustic ceilings with custom lexan panels, flooring, wall finishes, specialties, window treatments, lighting, and new MEP systems, including extension of the building's fire protection systems. All work was completed in accordance with the Bank of Princeton's construction standards

PNC Bank

Various Locations

Massimino Building Corp has completed over forty projects for PNC Bank. These projects have ranged from minor jobs such as door replacements and ATM installations to full branch fit-outs in existing shell spaces. We have worked in both high-rise buildings and single story branches.

We have undertaken a number of projects for the Bank in Center City Philadelphia, including work at 1600 Market Street, 40th and Walnut Streets, 1000-1014 South Street, and 1801 Market Street.

Recently Massimino Building Corp completed the first floor fit-out of an existing unoccupied storefront space in downtown New Brunswick. The project scope included select demolition, millwork, doors, frames and hardware, glass & glazing, security work, carpentry, drywall, acoustic ceilings, flooring, wall finishes, specialties, window treatments, and new MEP systems. This project attained LEED certification.

CASE STUDY

The Bank of Princeton Montgomery, NJ

The Bank of Princeton Montgomery project was a complete renovation of an existing branch. All work was completed while the bank remained in full operation. In order to accomplish this, we worked with the architect to implement a detailed phasing plan, which was developed to ensure minimal disturbance to the bank customers and employees.

The project scope included installation of a new exterior ATM location, all millwork and glazing materials necessary to create a new teller line, upgrades to the mechanical and fire alarm systems, new lighting, acoustical ceilings, signage and finishes.
